

CIGULAR® SLAB BEARING ECOLINE

NEW!

UNCOMPLICATED AND ECONOMICAL
Our new product for the bedding of ceilings

The latest innovation from Calenberg scores with an uniquely innovative connection system using dovetail gaps. The elements can be easily fitted together. Thus saving you time and costs during installation.

The Cigular® EcoLine slab bearing consists of an elastomeric core with round studs that has proven itself in construction practice over many years. New is the sheathing made of PE foam, which is characterised by a very fine, mixed-cell pore structure. Our innovative product is also equipped with a self-adhesive layer on one side, which ensures a secure and stable position during installation. It couldn't be simpler.

Cigular® EcoLine slab bearing is approved by the building authorities and is available in different core widths: 35, 60, 83 and 106 mm. The total width of the product is 400 mm and the bearing thickness is 10 mm.

The advantages in brief:

- economical
- short delivery times
- simple and quick installation / assembly
- wear-free and durable
- approved by the building authorities, No. Z-16.32-479

All technical details are specified in the data sheet and are published on our website.
