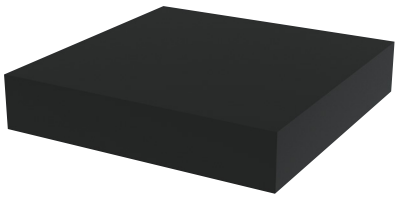
Cisador® 10

Elastomeric bearing for vibration isolation

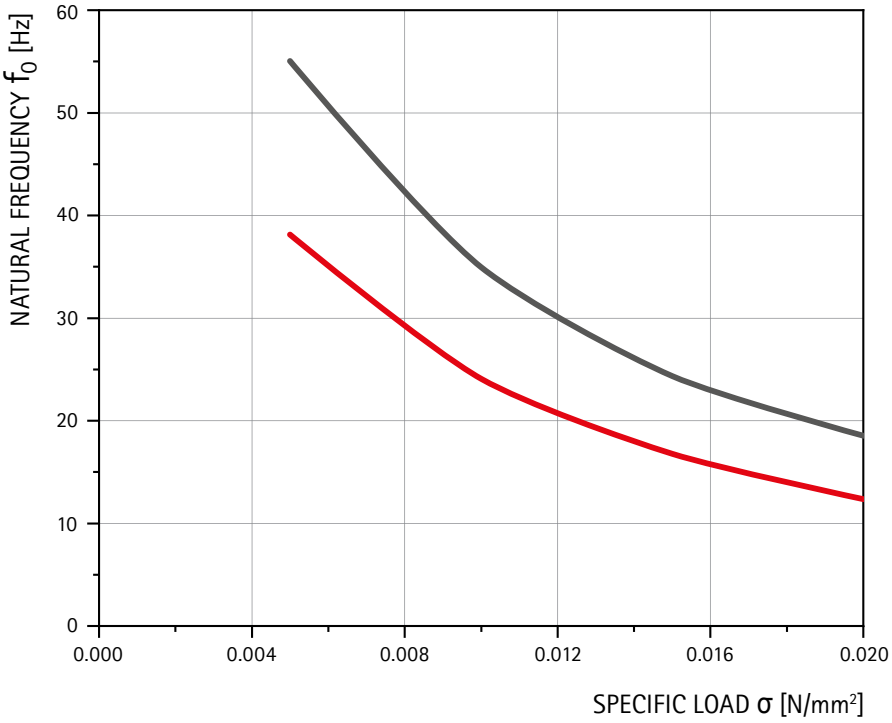
Product information

DIMENSIONS AND WEIGHTS	
Length	2000 mm
Width	1000 mm
Thickness	20 mm
Weight	2.6 kg / m²
Cut to size	available on request



PROPERTIES	
Materials	Closed-cell, microcellular EPDM
Permanent load	≤ 0.01 N/mm²
Permanent load + dynamic load	≤ 0.03 N/mm²
Load peaks (occasional and short-term)	≤ 0.10 N/mm²
Thermal stability	-40°C + 70°C
Flammability	B2 acc. to DIN 4102 (normally combustible)
Water absorption	≤ 5 %

Natural frequency



NATURAL FREQUENCY CURVE

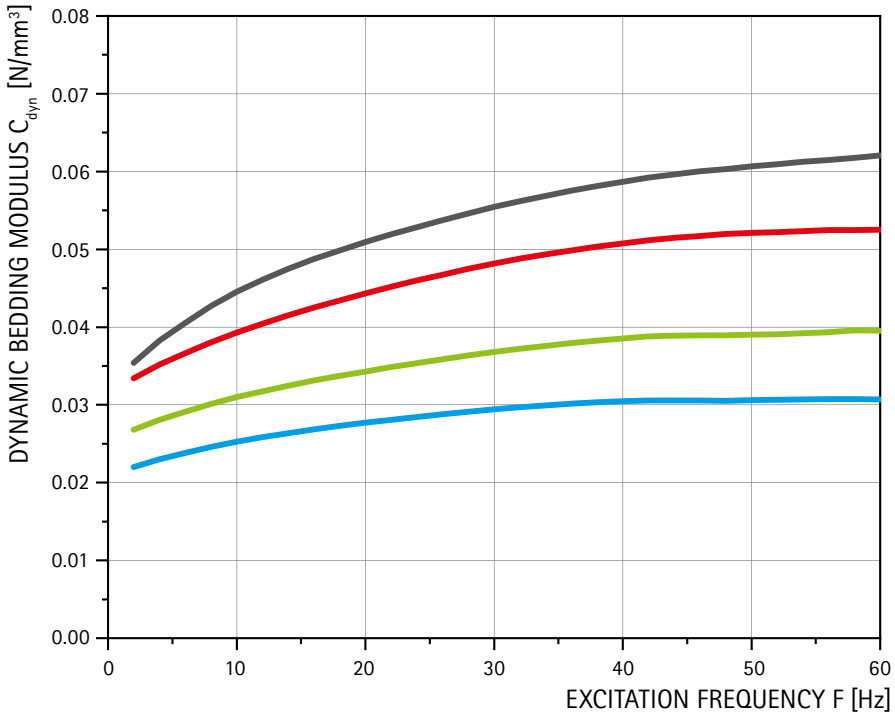
The figure shows the natural frequency of a single-degree-oscillator with Cisador® 10 as an elastic bearing for an excitation with a velocity amplitude of 1 mm/s.

t = 20 mm
t = 40 mm

Cisador® 10

Elastomeric bearing for vibration isolation

Dynamic bedding modulus depending on the excitation frequency (20 mm)

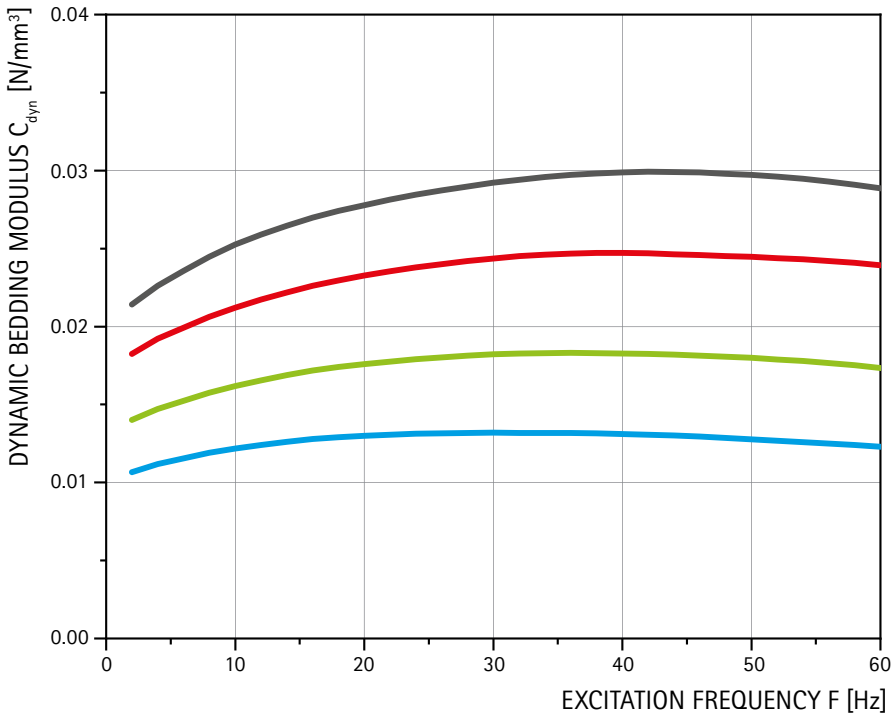


BEDDING MODULUS CURVES

The figures shows the dynamic bedding moduli for an excitation with a velocity amplitude of 1 mm/s and for different vertical compressive stresses.

- 0.005 N/mm²
- 0.010 N/mm²
- 0.015 N/mm²
- 0.020 N/mm²

Dynamic bedding modulus depending on the excitation frequency (40 mm)

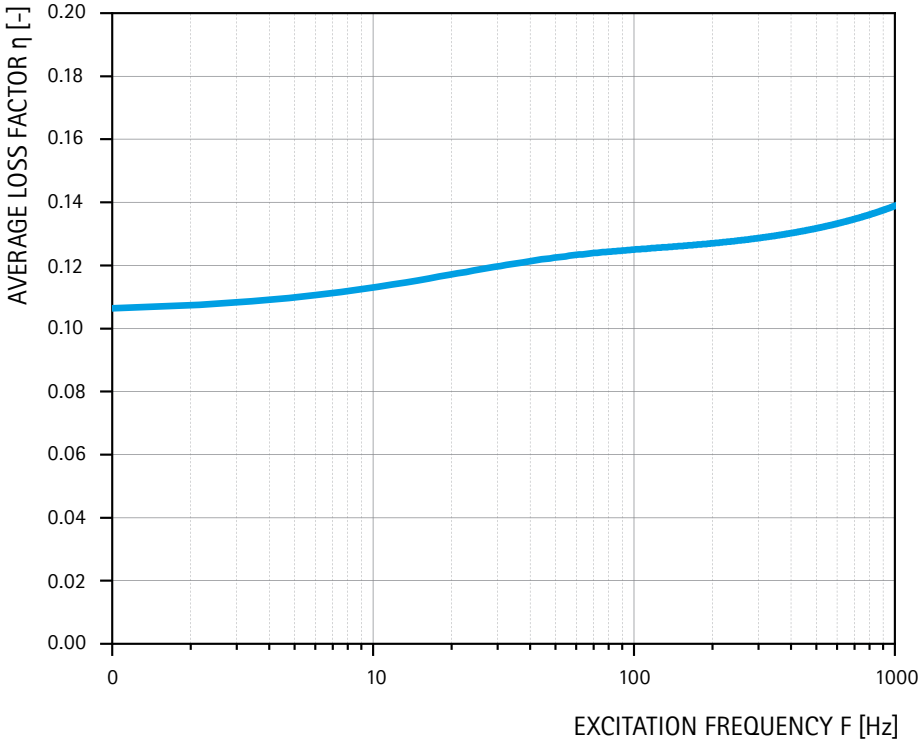


- 0.005 N/mm²
- 0.010 N/mm²
- 0.015 N/mm²
- 0.020 N/mm²

Cisador® 10

Elastomeric bearing for vibration isolation

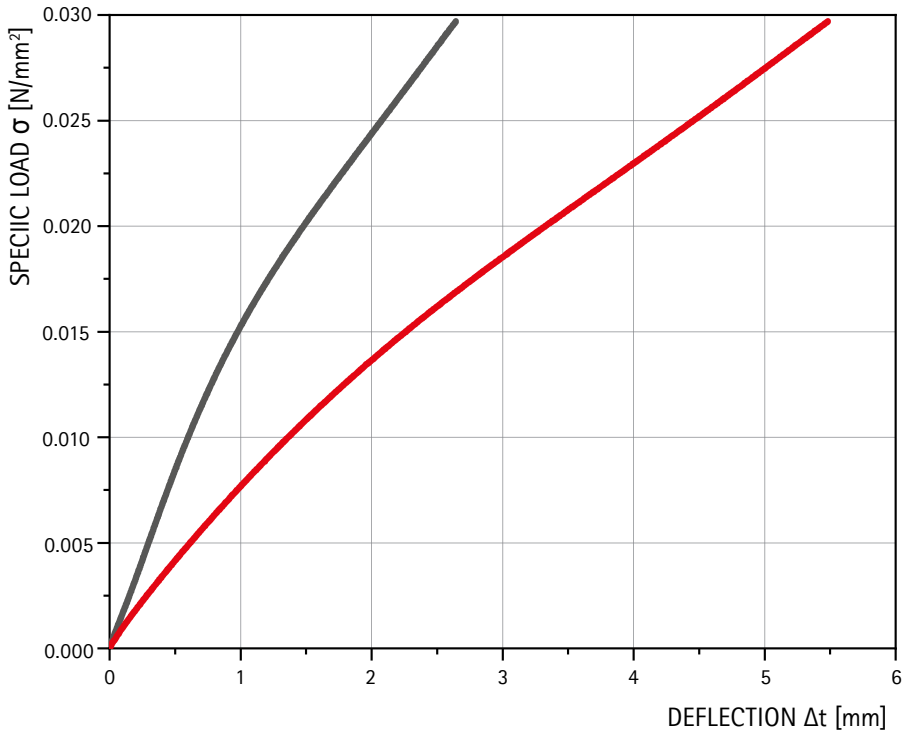
Loss factor



LOSS FACTOR CURVE

The loss factor is a measure of the energy loss per cycle in an oscillating system. The values shown in the diagram were determined by a DMA analysis using the WLF master curve method with a reference temperature of 20°C in order to be able to display as wide a frequency range as possible.

Load deflection



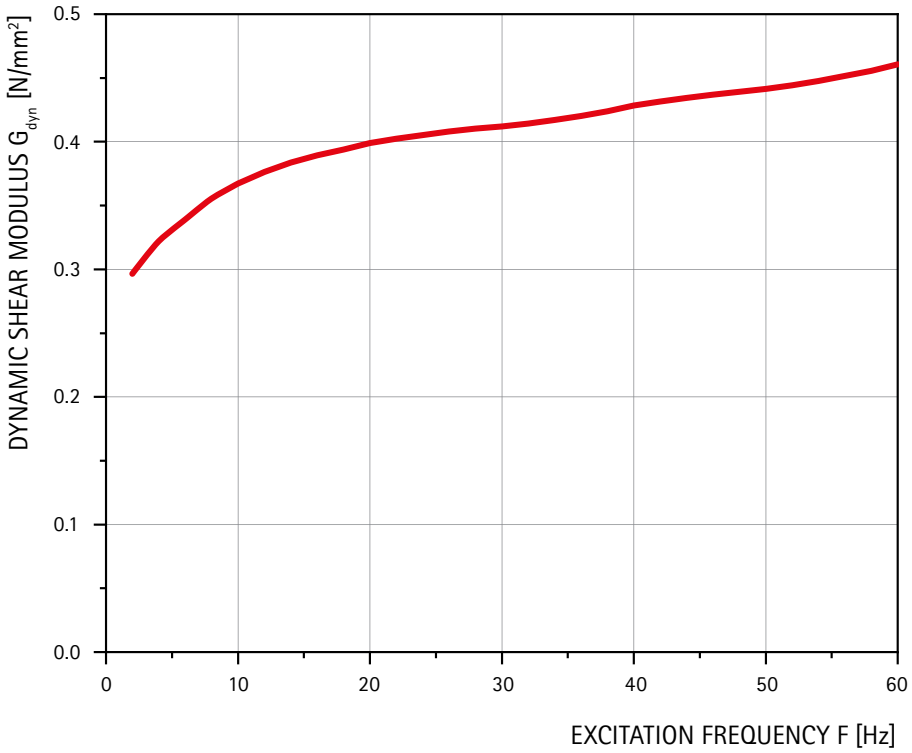
LOAD DEFLECTION CURVE

Application of uniaxial pressure against vertical deformation.

Cisador® 10

Elastomeric bearing for vibration isolation

Shear modulus



SHEAR MODULUS CURVE

The diagram shows the shear modulus of the 20 mm thick Cisador® 10 at a vibration velocity amplitude of 1 mm/s as a function of frequency. For greater thicknesses, the shear modulus tends to be lower.
